

Parans exhibits at Greenbuild, Boston, US, November 8-10th

Parans Solar Lighting will on November 8-10th display its products in Boston, US, at the world leading exhibition for green building technologies. Greenbuild is North America's largest exhibition dedicated for green building. Parans will together with Wasco Skylights, Parans's distributor in the US, display the innovative sunlight technology, the SP4 system.

Greenbuild gathers players within the green building field and is a forum for the latest and most pioneering within the field. Parans will now exhibit together with Wasco, who is Parans' exclusive distributor for the US market.

The environment certification program LEED is well spread in the US. By installing Parans' sunlight system there are possibilities to gain LEED points. As the Parans system can lead sunlight up 100 meters (*approximately 300 feet*) it enables a more extensive use of the system in buildings thus giving a larger customer value.

- Greenbuild has more than 18 000 visitors from more than 90 countries, says Anders Koritz, CEO at Parans. It is an important place to show our latest sunlight system SP4 as it is visited by architects, real estate developers, leaders and experts within the construction industry and the Energy and Sustainability sectors, but also a possibility to meet many relevant players at the same time.

Through Wasco's sales channels Parans' products are represented throughout the US. At Greenbuild, Parans will display the sunlight system and present its advantages for the visitors. The sunlight is lead via fiber optic cables deep into the building with retained light quantity and with minimum engagement in the building. Besides creating pleasant indoor environments and save energy, by using the sun as light source it is also possible to design buildings in an advantageous way regarding both energy consumption and space utilization.

Visit Parans and Wasco in booth #331 at Greenbuild, Boston, US, on November 8-10th.
