

# PRESS RELEASE

October 7, 2016, Lund, Sweden

## **Immunovia: Insiders transfer subscription rights free of charge**

LUND, Sweden — Within the framework of the ongoing rights issue at Immunovia AB (publ) (“**the company**”) Carl Borrebaeck and Christer Wingren, Chairman of the Board and Chief Technical Officer respectively at the company, have, on request from professional investors and in consultation with the company's financial advisor Vator Securities, transferred all subscription rights received in the rights issue to named investors.

The purpose of the transfer is to further strengthen the company's shareholder base with long-term professional investors. The transfers have been made free of charge and the receivers have undertaken to exercise all subscription rights to subscribe for new shares in the current issue.

### **About Immunovia**

Immunovia AB was founded in 2007 by investigators from the Department of Immunotechnology at Lund University and CREATE Health, the Center for Translational Cancer Research in Lund, Sweden. Immunovia's strategy is to decipher the wealth of information in blood and translate it into clinically useful tools to diagnose complex diseases such as cancer, earlier and more accurately than previously possible. Immunovia's core technology platform, IMMray™, is based on antibody biomarker microarray analysis. The company is now performing clinical validation studies for the commercialization of IMMray™ PanCan-d that could be the first blood based test for early diagnosis of pancreatic cancer. In the beginning of 2016, the company started a program focused on autoimmune diseases diagnosis, prognosis and therapy monitoring. The first test from this program, IMMray™ SLE-d, is a biomarker signature derived for differential diagnosis of lupus, now undergoing evaluation and validation. Immunovia's shares (IMMNOV) are listed on Nasdaq First North in Stockholm and Wildecos is the company's Certified Adviser. For more information, please visit [www.immunovia.com](http://www.immunovia.com).

### **About Pancreatic Cancer**

Pancreatic Cancer is one of the most deadly and difficult to detect cancers, as the signs and symptoms are diffuse and similar to other diseases. There are more than 40,000 deaths and over 50,000 new cases diagnosed each year in the U.S. alone, and the five-year survival rate for pancreatic cancer is currently 4-6%. It is predicted to become the second leading cause of cancer death by 2020. However, because resection is more successful in stage I/II, can significantly improve pancreatic cancer patients' 5-year survival rates from 4-6% to potentially 50-60%.
