Chalmers Engineering seamlessly integrates 3D design and structural steel detailing with AVEVA software

First Middle Eastern EPC to use AVEVA Bocad on Oil & Gas projects

Dubai, UAE – 11th August 2016: AVEVA announced today a leading Oil & Gas EPC, Chalmers Engineering (L.L.C.), based in the United Arab Emirates, has selected AVEVA Bocad for the structural steel detailing of its onshore and offshore projects. Already using AVEVA's 3D design modelling software, Chalmers is now able to seamlessly add AVEVA Bocad to its design process, via the AVEVA Bocad Steel Interface.

'AVEVA software gives us more accurate fabrication deliverables for the specific needs of the industry we serve', said George Kurien, Senior Design Engineer at Chalmers. 'Its key differentiator was how easily it could integrate structural steel detailing into 3D design. The combination of AVEVA Bocad Steel and AVEVA Bocad Offshore helps us save time due to the automated engineering process and we no longer need to rely on manual 2D tools for our structural steel design.'

'Conventionally, steel detailing is outsourced to specialist contractors, breaking the necessary close integration between piping and structural design, and creating opportunities for inconsistencies, clashes, costly rework and project delays', said Louis Khoury, SVP of Operations – MEA. 'Yet AVEVA's strategic acquisition of the Bocad software, and subsequently FabTrol, enables close collaboration, high productivity and reduced business risk in the integration of plant structural and piping design.'

AVEVA Bocad Steel enables rapid, high-quality detailed design, fabrication and construction, for on-time, on-budget delivery of high-quality commercial steel fabrication projects such as stadiums, bridges, skyscrapers, pre-engineered buildings, industrial, agricultural and residential buildings. AVEVA Bocad Offshore extends the productivity of AVEVA Bocad Steel with special features for the specific needs of the offshore industry.

Work will begin this year on an offshore project for the Kuwait Oil Company using the expanded software solution.

About AVEVA

For almost 50 years, AVEVA software has enabled the creation of some of the world's most complex power and process plants, vessels and offshore facilities. AVEVA's Digital Asset approach ensures there is always an accurate digital representation of each physical asset. This allows engineering contractors, Owner Operators and shipbuilders to work more safely, more efficiently and with less risk throughout the life cycle of their projects and operations. AVEVA is the proud winner of the Frost and Sullivan 2015 Global Engineering Information Management Solutions Competitive Strategy Innovation and Leadership Award.
