

Clinical results from the use of Episealer® to be presented at the annual meeting of the Swedish Orthopaedic Association

Episurf Medical (NASDAQ: EPIS B) today announces that the scientific abstract "Clinical results of an individualized mini-metal implant for focal cartilage lesions in the knee" by Ass. Prof. Karl Eriksson has been accepted for presentation at the annual congress of the Swedish Orthopaedic Association. The congress will take place in Karlstad, Sweden on August 27-31, 2018. The abstract focuses on patients treated with the Episealer® knee implant for focal cartilage lesions. The results will be presented by Ass. Prof. Karl Eriksson from the Stockholm South General Hospital, Sweden.

"In the abstract it is concluded that the study shows excellent early clinical results in the treatment of focal symptomatic cartilage lesions. The results show high patient reported scores and a low early revision rate and this is exactly what we want to achieve. Our customers attest to the treatment gap and all proofs of successful treatment of this patient group are highly interesting" says Pål Ryfors, CEO Episurf Medical.
