BioArctic enters into Collaboration with AbbVie for Parkinson's Disease Research

Stockholm, Sweden, September 20, 2016 – BioArctic announced that it entered into a strategically important collaboration with AbbVie (NYSE: ABBV), a global biopharmaceutical company, to develop and commercialize BioArctic's portfolio of antibodies directed against alpha-synuclein for the treatment of Parkinson's disease and other potential indications.

Parkinson's disease is the second most-common neurological disease, affecting more than 10 million people worldwide. Mutations in alpha-synuclein are strongly linked to development of Parkinson's disease. Soluble aggregates of the alpha-synuclein protein are toxic to neurons and lead to the deposits that are a hallmark of the disease.

"AbbVie has shown a strong commitment to Parkinson's disease and I am proud that they have chosen to collaborate with BioArctic. I am looking forward to a successful partnership that hopefully will result in a new innovative disease modifying treatment becoming available to the large number of patients suffering from Parkinson's disease," said Gunilla Osswald, CEO at BioArctic.

Financial terms were not disclosed.

About BioArctic

BioArctic AB is a Swedish privately held research-based biopharmaceutical company founded in 2003. The company's mission is to provide new and effective treatments for patients with disorders in the central nervous system. Its proprietary technology and dedicated personnel have made it possible to develop new immunotherapeutic approaches to neurodegenerative diseases. We focus on therapy areas with a large medical need such as Alzheimer's disease, Parkinson's disease and spinal cord injury. For further information on BioArctic and its research, please visit www.bioarctic.se.

About AbbVie

AbbVie is a global, research-based biopharmaceutical company formed in 2013 following separation from Abbott Laboratories. The company's mission is to use its expertise, dedicated people and unique approach to innovation to develop and market advanced therapies that address some of the world's most complex and serious diseases. Together with its wholly-owned subsidiary, Pharmacyclics, AbbVie employs more than 28,000 people

worldwide and markets medicines in more than 170 countries. For further information on the company and its people, portfolio and commitments, please visit www.abbvie.com. Follow [@abbvie](https://twitter.com/abbvie) on Twitter or view careers on our [Facebook](#) or [LinkedIn](#) page.
