## First in Australia: Tilt Renewables chooses Greenbyte for data management

Tilt Renewables has selected Greenbyte Energy Cloud, the cutting-edge service for wind farm management and data analysis.

Tilt Renewable operates a full wind portfolio made out of 8 farms and approximately 600+ MW, marking the first assets Australia and New Zealand integrated in Energy Cloud. Tilt Renewables is striving to be the leading manager, owner and developer of renewable energy assets in Australia and New Zealand, with an additional 7 wind farms, 3 solar farms and 1 hydro plant under development. Energy Cloud, the service with the specialized interconnected components of Breeze for wind and Bright for solar – along with Stream, for hydro under development – proved to be the optimal software solution to support the vision of Tilt Renewables, presently and in the future.

“We’re excited to be partnering with Greenbyte to monitor our fleet and improve our asset performance. We chose Greenbyte Energy Cloud due to its modern, powerful and easy-to-use interface, along with its ease of integration. Greenbyte’s culture of innovation, customer-focused outcomes and continual improvement closely aligns with Tilt Renewable’s values. In the first few

# GREENBYTE

months of operations, we've already picked up on multiple energy improvements and Breeze is our go-to for our asset data. Tilt Renewables is continually innovating in the renewable energy industry and Greenbyte and Greenbyte Energy Cloud are an integral part of this strategy.", says Perrin Samuel, Technology Manager of Tilt Renewables.

"Tilt Renewables is a fast-growing renewable energy company, with a development plan similar to Greenbyte's. We are proud to have been selected by Tilt and to be present in Australia and New Zealand. We are looking forward to a fruitful collaboration towards a sustainable world" says Jonas Corné, CEO at Greenbyte.

## About Tilt Renewables

Tilt Renewables is an Australasian electricity generation company that aims to be the leading developer, owner and manager of renewable energy generation assets in Australia and New Zealand. With 7 operational wind farms in Oceania and a number of potential development projects in the pipeline, Tilt Renewables's strategic goal is to more than double their current operating renewable generation capacity over the next five years.

## About Greenbyte

Greenbyte makes the industry leading independent renewable energy management system Energy Cloud – used globally by wind and solar PV owners, operators and asset managers to capture the full potential of renewable energy portfolios. Power plants are remotely connected to Greenbyte's software via on-site SCADA systems – resulting in a single powerful tool to monitor, analyze, plan and control diverse renewable energy portfolios of any size. Currently 14 GW of renewable energy across 6 continents and 30 countries are monitored in Greenbyte's software.
