

Ahlstrom-Munksjö launches Trinitex[®] Advance W3200 for unrivaled efficiency gas turbine filtration

Ahlstrom-Munksjö announces the launch of Ahlstrom-Munksjö Trinitex[®] Advance W3200, a unique E12 filtration media specifically designed for pulse jet gas turbine applications.

“Following on from the high level of interest generated by the Trinitex[®] Advance W3000 launch in November last year, we are very pleased to now introduce Ahlstrom-Munksjö Trinitex[®] Advance W3200” says Robin Guillaud, VP Business Development Filtration and Performance; “Trinitex[®] Advance W3200 is a natural extension of our Trinitex[®] Advance product range and has been designed for pulse jet gas turbine applications requiring the highest level of performance” he adds. “Trinitex[®] Advance W3200 has the ability to combine EPA (Efficiency Particulate Air) EN1822 E12 Efficiency Class, producing up to 30 times purer air than media with E10 Efficiency whilst delivering unrivaled protection of the gas turbine in all demanding conditions, especially humid or industrial environments” he concludes.

Ahlstrom-Munksjö Trinitex[®] Advance W3200 is the second product launch from the Trinitex[®] Advance platform, a range of high performance filtration media designed to purify air for different industrial applications.

“We are very pleased to introduce the W3200 grade into our Trinitex Advance platform, bringing to market a filter media with exceptional performance levels for pulse jet gas turbine applications” comments Fulvio Capussotti, EVP Filtration and Performance. “Delivering high performance filtration media for industrial filtration is a priority for our business area and we will continue to develop and strengthen our product offering” he adds.
