

Attana receives contract research order from HVD Life Sciences

Attana has received a contract research order from distribution partner HVD Life Sciences. The contract concerns antibody-antigen interactions with applications in crude environment and will be performed during Q3 and Q4.

In March, Attana and HVD Life Sciences signed a distribution agreement covering Asia, Russia including CIS/NIS, Eastern Europe, South East Europe and Austria. The current order is from an customer within HVD Life Sciences territory. Attana's application specialists will perform interaction analysis assays. The interaction between target antigens and a several antibodies will be detailed characterized with respect to specificity, interaction kinetics and affinity. The results will be used applications for target detection in crude environments where proteins and other biomolecules makes detection difficult.

The Board of directors for Attana consider that the information in this press release is not likely to have a significant effect on the share prices, but is of general interest for the shareholders and hence should be communicated.

Attana was founded in 2002 with the vision of *in-vitro* characterization of molecular interactions mimicking *in-vivo* conditions. Since then, Attana has developed proprietary label free biosensors for biochemical, crude, sera, and cell-based assays. Attana's products and research services are used by Big Pharma, biotech companies and academic institutions within the life sciences. To learn more about Attana's contract research services and our label free cell-based biosensors, please visit www.attana.com or contact sales@attana.com.
