CYXONE

Existing Rabeximod can be used in Cyxone's planned Phase 2b study in patients with rheumatoid arthritis

Cyxone has analysed the Rabeximod that was previously manufactured by OxyPharma for clinical trials at Syntagon AB. Results show that the existing substance, despite having been stored for several years, can be used in Cyxone's upcoming Phase 2b study in patients with rheumatoid arthritis.

Consequently, Cyxone does not believe that it is necessary to produce new batches of Rabeximod. This represents a considerable saving for the company and facilitates the start of the clinical programme.

About Cyxone

Cyxone AB (publ.) is a biopharmaceutical company that develops drugs based on cyclotides, a class of natural plant protein. Cyclotide technology has the potential to provide new drugs with beneficial pharmacological effects on diseases that currently lack safe and effective treatments. The company is focusing on the development of substances that inhibit key processes in cells that are typically associated with various immune disorders, such as multiple sclerosis and rheumatoid arthritis. Cyxone's Certified Adviser on the Nasdaq First North is Erik Penser Bank, which can be reached on +46 (0) 8 46 38 000.
