

PRESS RELEASE - Söderköping, may 2012

Popular dust extractor is now even more compact

The construction on the popular dust extractor HTC 80 iD was recently updated in order to facilitate for a better transportation. The machine, which since its launch in December already has become internationally awarded for its excellent performance, is now also available in a lower height.

The standard height of HTC 80 iD has now, with the new construction, been dropped to 1730 mm (68 in). However, it is still possible to obtain the higher version of the machine like before, which is 1810 mm (71 in). The reduced height means that the machine now also can be transported in vans with smaller cargo space.

Prolonged deliver times

The success for HTC 80 iD continue and the interest from our customers worldwide remains high which has led to slightly prolonged deliver times. In order not to delay your shipment further, we recommend that you place your order as soon as possible.
