

## The production for February 2017 totaled in 35 GWh

The production from the Company's wind farms for February 2017 totaled 35 GWh. Due to weak winds during the month the production outcome was about thirty percent under expectation, which is representative for all parts of Sweden. The adverse weather conditions during the month contributed to an availability in the Company's wind farms of 95 percent.

Rabbalshede Kraft offer operating services and operates wind farms around Sweden, in-house or for external partners. Rabbalshede Kraft operates 141 turbines (341 MW), of which 71 turbines (190 MW) are proprietarily managed and 70 turbines (151 MW) are owned by external partners. The annual production capacity of the 141 wind turbines is 900 GWh.

The expected production is based on an average wind year. The differences can in certain periods be very large and affecting revenues and earnings during a single quarter or a year.
