

The latest product news from DENTSPLY Implants – the new powerhouse in implant dentistry

IDS, Cologne, Germany, March 2013 – DENTSPLY Implants, the union of Astra Tech Dental and DENTSPLY Friadent, will present their unique and comprehensive product portfolio in the DENTSPLY Village at IDS 2013.

In the large DENTSPLY Village, you will see and experience DENTSPLY Implants, up close and personal. The product portfolio will be presented in various areas, highlighting the freedom to create predictable and lasting patient-specific implant solutions with an extensive line of dental implants, bone regenerative products, digital technologies and professional development tools. The implant systems and ATLANTIS™ patient-specific CAD/CAM solutions are covered by DENTSPLY Implants comprehensive warranty program.

New and updated products will be presented within Digital Open Solutions and Dental Implant Systems.

ATLANTIS ISUS™ implant suprastructures

ATLANTIS ISUS™, the unique, patient-specific, CAD/CAM implant suprastructures, welcomes the 2in1 product into the family of digital open solutions. This double construction for removable prostheses has a precise conical friction fit, with a design based on the tooth set-up.

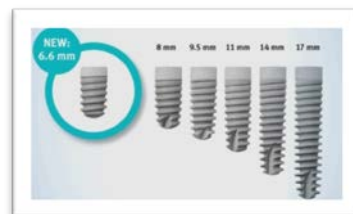

ATLANTIS™ Abutments

In the area of lab-based scanning, the new connectivity with 3Shape scanners allows users worldwide to quickly and easily transfer digital scan information of patient oral geometry to the ATLANTIS™ design and manufacturing facilities.

ANKYLOS® implant length 6.6 mm

Implant length 6.6 mm is now available for the ANKYLOS® Implant System. The shorter implant allows for better use of existing bone and may reduce the need for bone augmentation.

XiVE® Platform-Switch concept

Platform-switching is an approved treatment method to achieve improved preservation of crestal bone levels. Numerous clinical studies confirmed that a healthy soft tissue will be achieved by using diameter-reduced abutments. This concept is now available for XiVE®.

WeldOne™ concept

The new treatment concept WeldOne™, supporting immediate loading solutions, is announced. The technology is available for ANKYLOS® and XiVE® implant systems, and enables dental professionals to create temporary as well as durable restorations, reinforced by titanium frameworks welded directly in the mouth.

SimPlant® GO / SimPlant® 15

With SimPlant® GO software for guided implant surgery, planning is easy and fast, and then transferred directly into a fully predictable surgery. The new software SimPlant® 15 further increases the predictability for the surgical procedure and prosthetic restoration.

DENTSPLY Implants creates value for dental professionals, and allows for predictable and lasting implant treatment outcomes, resulting in enhanced quality of life for patients. As a part of DENTSPLY International Inc., a leading manufacturer and distributor of dental and other healthcare products for over 110 years, DENTSPLY Implants continues its strong commitment to innovation, clinical research, and professional collaboration.
