Boule Diagnostics wins big tender in India

Boule Diagnostics AB has won a tender for 136 Medonic systems in partnership with one of its Indian distributors. The tender was in Uttar Pradesh, the most densely populated state in India with around 200 million inhabitants. The instruments will be installed in 136 hospitals starting in early July 2016.

“Our strategic targeting of India - where we have had a sales office since late 2013 - has proved correct. In the first quarter of this year, we have doubled our sales compared to previous year and have now won this important tender,” said Ernst Westman, Group President and CEO, Boule Diagnostics AB.
