

Tilgin launches the HG2380, a true high-end Home Gateway

Stockholm, Sweden, October 21, 2014: Tilgin, a leading provider of solutions for multi-play and next-generation broadband access, launches a new high end Home Gateway at the Broadband World Forum, 21 – 23 October 2014, at Rai- conference center, Amsterdam.

Tilgin's new HG2380 push the definition of high-end Home Gateways by radically increasing Wi-Fi performance. The HG2380 is equipped with a 802.11ac compliant triple-stream Wi-Fi radio giving performance beyond 600 Mbps. Together with the any-client beamforming technology, the HG2380 will give increased quality of experience with both better coverage and superior performance. Beamforming on both 2.4 and 5GHz, greatly benefits devices using only one antenna, such as smart phones and tablets. The Wi-Fi characteristics of the HG2380 also makes it a perfect solution for Wi-Fi hotspots.

"We answer both the Wi-Fi coverage as well as the throughput needs. We are certain to give all end-users the best quality of experience, for any device used today. With the HG2380 we offer Operators the best Wi-Fi solutions available today." says Eric Hjelmestam, VP Solution Management & Marketing at Tilgin.

The HG2380 also has an option for built in DECT/ CAT-iq, with richer voice services. A ULE interface opens up the path for smart home services. Operators establish a smart home service hub simply by installing the HG2380 and can launch new services by just upgrading the software.

Mr Hjelmestam continues "The HG2380 with DECT/ CAT-iq and the ULE option, provides a business rational way to future smart home services for Operators."

Alongside the HG2380 there will also be a multi access version with VDSL2; the HG2280. All models carry the new design made to fit in today's modern homes.

The HG2380 will be unveiled at Tilgin's stand, G20, during the Broadband World Forum taking place at RAI, Amsterdam 21 – 23 October 2014.
