New Website Showcases Company's Groundbreaking, Patented Solidification/Stabilization Solid Waste Management Technology

Innovative Field Solutions Target the Oil and Gas Industry

(Longview, Texas) – Scott Environmental Services, Inc. (Scott) announces today the official launch of its website, www.scottenv.com, which features the company's advanced techniques and patented technology to recycle, treat, and/or dispose of solid drilling waste at oil and gas operations.

"Our goal for the website is to provide straightforward information on our site-specific remediation solutions for oil and gas operators looking to reduce liabilities, lessen their environmental footprints, and cut costs," said J. Blake Scott, founder and president. "The website will also highlight the fact that after nearly 20 years in the oil-field service business, Scott Environmental Services continues to improve and innovate."

Scott specializes in the recycling of oil and gas well waste, having developed proprietary processes designed to allow the recycling of both fresh-water and salt-water-based mud and cuttings and oil-based drilled cuttings into environmentally sound and durable roads, drill pads, and a variety of other structures. The technology, which is described on www.scottenv.com, has been scientifically proven by academic experts and approved by governmental agencies responsible for oversight of solid drilling waste.

The user friendly website will also be a place for customers, industry professionals and the public alike to learn about Scott's leadership, background, locations, and research and development partners.

About Scott Environmental Services, Inc.

Scott Environmental Services, Inc. provides solidification and stabilization technology and services to the oil and gas industry that are focused on customer site-specific solid waste control. By concentrating on evidence-supported service results and optimizing our customers' regulatory compliance, we offer products and services that are reliable and proven.

We are committed to customer satisfaction through our technical leadership in solid drilling waste management, ethical practices, and skilled and knowledgeable employees.
