

Rejlers receives major contract for the Transport Administration

(REJL B)

The railway section between Arlöv (north of Malmö) and Flackarp (south of Lund) will be expanded from double tracked to quadruple tracked. The capacity of the route is important for the railways across the country and for all freight traffic to and from abroad. It is a very technical and logistical advanced project as the expansion will take place during the ongoing traffic.

Rejlers has received three assignments in the project including the design of overhead contact line, electric power and signal systems for the production of a Railway design plan and System documents. The order includes an option for construction plans, engineering support during construction and also relation- and administrative documents.
