Rejlers wins hospital contract in Mikkeli

Rejlers has been appointed as supplier of HVAC and electrical engineering to the hospital project ESPER in Mikkeli. Rejlers will design HVAC and all the technical systems for electricity, lighting, telecommunications and security to Mikkeli Central Hospital in Finland. The project is expected to be completed in 2020.

The project includes new buildings on the hospital campus of around 18,800 m² and the old buildings will be renovated. The goal is to integrate Mikkeli's basic health care, special health care and social work into one entity. The aim is to create a good and smooth service chain for customers and patients, a pleasant working environment and effective management of costs. Mikkeli Central Hospital will be the region's emergency hospital open around the clock.

- The contract is important for Rejlers' building and property consultants in Mikkeli and Vantaa. Our expertise and experience of technically complex hospital projects was crucial to win the contract, says Timo Tenninen Business Area Manager for Building and property.
