## ASSA ABLOY's acquisition of Indala completed

- Motorola's RFID business Indala is a well regarded player in the access control industry
- Indala has sales of approximately USD 25 M with low profitability
- Considerable synergies with HID's operation
- Installed base of 60 million cards and 1 million readers
- The acquisition is expected to be EPS positive from the start

The acquisition of Motorola's worldwide assets of the radio-frequency identification (RFID) access control business, Indala, has now been completed.

Indala is a highly regarded player in the access control industry, with headquarters in San Jose, California. The company was founded in 1985 and acquired by Motorola in 1993. The product offering is to a large extent the same as HID's, consisting of RFID based cards and readers for the access control industry and other applications. The installed base of Indala products is substantial with 60 million cards and 1 million readers installed. The RFID access control business is expected to turn over USD 25 M this year with low profitability.

The acquisition creates good scope for synergies in all areas. The goodwill created by the acquisition is minimal and will be tax deductible. The acquisition will be EPS positive from the start.

The Indala business will be consolidated from 1 November 2001.
