

FOR IMMEDIATE RELEASE

Mölnlycke unveils new Mepilex® innovations at the 27th European Wound Management Association conference

Mölnlycke is set to launch updated Mepilex® Border Sacrum and Mepilex® Border Heel dressings, followed by new Mepilex® Border Flex and Mepilex® Border Post-Op dressings to be released later this year.

Gothenburg, Sweden – 4 May 2017

Mölnlycke, a world-leading medical products and solutions company, today unveiled innovations in its Mepilex® product range at the 27th conference of the European Wound Management Association (EWMA) in Amsterdam, the Netherlands. Mepilex® Border Sacrum and Mepilex® Border Heel dressings – for treatment and prevention of pressure ulcers – now have enhanced user features that are optimised for easy handling.

New Mepilex® Border Flex is an all-in-one foam dressing with next-generation Flex technology. It can be used to manage a wide range of exuding wounds. Mepilex® Border Post-Op can improve patient comfort and reduce post-operative dressing-related costs through its longevity¹⁻². Both Mepilex® Border Flex and Mepilex® Border Post-Op have a flex-cut design that stretches in all directions, conforming to the body even as it moves³.

Mölnlycke has a strong focus on product innovations and clinical outcomes. The company works with leading clinicians and wound care organisations around the world; together, building on best practice, and gathering evidence to demonstrate improvements in treatment and prevention. Mölnlycke wants to build on its strong heritage in product innovation, continuing to drive the future of wound care treatment and prevention.

Mölnlycke Chief Executive Officer Richard Twomey said: 'For Mölnlycke, it's all about the outcome. Our strong focus on product innovation and clinical evidence has continuously changed the way wounds are treated and prevented. This year at EWMA, we're proud to unveil more innovations in our Mepilex® range. Now healthcare professionals have more solutions that deliver better patient and budget outcomes.'
