

GiftAir: The New Energy-Producing Personal Air Device

Believing clean air is a necessity for all, GiftAir has launched a crowdfunding campaign to make the new device widely available.

SEOUL, Korea – GiftAir is a small device that can make a big difference in children's health. Through the use of air-ion technology, the portable device silently creates clean air for those within a 22-inch diameter and up to a 37-inch diameter when mounted to a baby stroller. The revolutionary device incorporates many smart features. To produce the new product, GiftAir has launched an Indiegogo crowdfunding campaign with a goal of \$30,000 and a project end date of January 18, 2015.

The palm-sized device was developed to provide people with an air purifier that protects against outdoor air pollution. Children are more susceptible to chronic diseases from the accumulation of toxic substances over a period of time. Between birth and three years of age is the most crucial developmental stage in life. GiftAir was created to protect these little ones' health during this growth stage. It's usefulness is not limited to just children. It may be used by the elderly or any person with or without a compromised immune system. The device blocks out offensive airborne materials such as viruses, VOCs, odors, dusts, pollen, and allergens.

GiftAir is solar powered, allowing it to be charged with exterior and interior lighting. The long lasting battery can work for up to 16 days without any light energy. It incorporates rebound charging, which allows constant charging even when its in use. The emergency charging port allows it to be plugged in with an Android phone charger when it needs immediate charge.

The body of GiftAir is made of plant sourced eco-plastic that is BPA free, making it safe for children. It can be mounted virtually anywhere with its strong clip. The air-purifying device makes a perfect gift for any parent with small children.

Supporters of the crowdfunding campaign can be among the first to own GiftAir. The campaign is offering an early bird special that allows backers to receive the new air cleaning device, which will retail for \$210, for a pledge of just \$111.
