## **SALUS parades largest ever line-up of heating controls**

The industry leader in heating control solutions - SALUS - is returning to Ecobuild with a vengeance this year. Parading the largest ever line-up of heating controls, the company will also be unveiling a new and enhanced thermostat that further advances the boundaries of internet-enabled controls. As well as live product demonstrations, technical specialists will be on hand to advise on energy-efficient home heating systems.

A new version of the ground-breaking **iT500** thermostat will take centre stage. Featuring a redesigned and upgraded app for smart phone, PC and tablet usage, this pioneering internet-enabled thermostat with wireless capabilities continues to take heating controls to new heights. The **iT500BM** control that may be installed without any wiring will also be on show, together with a wide range of thermostats, magnetic filters, timer controls, TRVs and underfloor heating controls.

Commenting on its return to Ecobuild, SALUS' European Managing Director, Dean Jepson said: "Ecobuild was a resounding success for us last year. As well as connecting with installers and merchants, we were able to widen our reach to architects, specifiers and local authorities who were thoroughly impressed with our extensive portfolio of heating controls.

"With new and improved products, we look forward to the opportunity to showcase the superior design, ease of installation and energy saving features for which SALUS is renowned," adds Dean.
