

Aquavolve, LLC Debuts Revolutionary Eole Water Making Systems & Announces Charitable Affiliation w/Benevolent Water Aid, Inc. for Clean Water

Boston-based Aquavolve, LLC builds economies of water globally

Donations are now being accepted via the Aquavolve website

100% of all funds will go directly to those in need of clean water nationally and internationally to help solve global water crisis

Today **Aquavolve, LLC** (www.aquavolve.com) announced a charitable affiliation with **Benevolent Water Aid, Inc.** to fund bringing clean water where it is needed globally.

BWA, Inc. is a non-profit 501(c)(3) company devoted exclusively to funding bringing clean water to those in need. The company will deploy donated funds and assistance quickly and effectively and 100% of all donations are applied directly to those in need of water.

Aquavolve, LLC is the U.S. based service provider of water generating condenser units invented by Marc Parent, Founder of Eole Water, based in St. Tulle (France). The Eole Water Making System uses a revolutionary technology that creates water out of the humidity in the air. The Neries.S3 Water Making System creates 27 gallons of clean, potable, World Health Organization Standard water every day. The larger WMS 1000 series unit makes up to 525 gallons of water per day. Eole Water Making Systems can be configured to be powered by solar, a mixture of solar and grid tie electricity, diesel or natural gas generators, or the wind.

Aquavolve Founder & CEO, Dan Konstanty, states, "With the recent release of the latest U.S. Drought Monitor Map (<http://droughtmonitor.unl.edu/>) and its grim results, our mission to bring clean water where it is needed most is even more urgent. Thankfully, our efforts will be amplified by our affiliation with Benevolent Water Aid, Inc. We guarantee 100% of all donations will go where water is needed most. Aquavolve encourages everyone to consider making a year-end donation in any amount – giving water saves lives and the Eole Water technology is the best solution today."

On November 7 2013, Aquavolve hosted the company's World Premiere in Dripping Springs (TX) with Texas State Representative Jason Isaac to showcase how the Eole Water Making Systems create water from the humidity in the air. Texas State Representative Jason Isaac delivered a message of hope and abundance to his constituents, and to the entire state (<http://hereandnow.wbur.org/2013/11/21/texas-farmers-drought>) including key members of the Oil, Natural Gas, Utility, Disaster Response, and Military sectors. Land developers, previously hindered by a lack of water resources, were also in attendance to learn how this technology and service can provide critical resources to the people of Central Texas. CEO Dan Konstanty was joined by Inventor and Eole Water CEO, Marc Parent, and Eole Global Distribution Manager, Cecile Hourtane from their offices in France.
