

## OrganoClick and BAUX signs collaboration agreement

**OrganoClick has today entered into a collaboration agreement with fast growing BAUX to develop new interior design products based on OrganoClicks biocomposite material ORGANOCOMP®. The aim with the collaboration is to launch a first product in the beginning of 2019.**

The Swedish interior design company BAUXAB has experienced rapid growth for several years, thanks to their innovative designed acoustic products used in offices and public spaces worldwide. Their current products are mainly made from the composite material Träullit based on wood fibres, water and cement. Now BAUX will continue to strengthen its sustainability profile further by developing a new range of innovative products within interior design based on OrganoClick's biocomposite OrganoComp®. BAUX currently sells their products through a global network of sales agents to customers such as Google, Boston Consulting Group, Stella McCartney, and WeWork.

Sustainable interior design products suit very well with OrganoClicks 100% bio-based biocomposite OrganoComp® as it can replace fossil-based plastics and non-sustainable formaldehyde adhesives. BAUX and OrganoClick have since 1 year collaborated to adapt OrganoComp® for BAUX products.

"OrganoClick has worked strategically with adapting its materials to be suitable for interior design applications and we are very happy for the collaboration with BAUX. BAUX has been an important player for us in specifying the requirements and also to verify that we fulfil their requirements. We are now looking forward to developing and launch some great interior design products together with BAUX", says Märten Hellberg, CEO OrganoClick AB.

"We work hard to find innovative solutions and new products that offer our customers the opportunity to replace fossil-based chemistry. With OrganoComp®, we have found an exciting sustainable material that fulfils our requirements for tomorrow's safety and environmental standards", says Fredrik Franzon, CEO BAUXAB.
