

## Recipharm and Adroit Science form collaboration to expand service offering

Recipharm AB and Adroit Science AB today announce the formation of a new strategic collaboration. Adroit Science AB will support Recipharm's pharmaceutical development with high quality solid state characterisation services. By combining expertise in formulation development, API development, chemical analysis and solid state characterisation, both the speed and cost of development can be reduced whilst, at the same time, quality is improved.

"I am very excited about this collaboration", says Carl-Johan Spak, Executive Vice President, Development & Technology at Recipharm. "With the addition of development services from Adroit, we will have a very competitive offering, which will help our customers to progress their projects in a highly efficient way. Adroit Science AB has fast established itself as one of the leading providers of solid state characterisation services in Northern Europe. Indeed, we can offer an even better service to our customers through this collaboration, including complete development from molecule to product."

"Adroit Science and Recipharm have already cooperated in a number of successful projects, and this formal partnership marks the logical next step in the mutual development of our strategic relationship. We are delighted to join forces with a leading CDMO like Recipharm and predict that this will bring new opportunities in worldwide customer support" remarked Hans Gredeby, CEO of Adroit Science AB.
