

Bricknode launches App for synchronization with Nordnet Bank

Today Bricknode (www.bricknode.com) launches a new application in the Bricknode Add-On Marketplace called Nordnet File Import App. The application can be launched as an add-on to Bricknode Financial Systems (BFS) and integrates seamlessly for importing transactions and positions from Nordnet into BFS. BFS can be used for issuing allocation orders to Nordnet, offer a customized experience to customers and achieve a high level of automation.

STOCKHOLM, 11th of June 2016

Bricknode develops and offers a cloud based financial business platform including modules like back office, financial advisory, account management, customer portal, real time trading and insurance.

Bricknode Financial Systems (BFS) can be used by financial companies to offer trading and investing in various financial instruments. With the Nordnet File Import App BFS can work completely integrated with a financial institution like Nordnet Bank.

“Many of our customers that are using BFS are working with partners to keep their end-client assets and executing trades on behalf of the end-clients. We see a need for our customers to being able to offer their end-clients a customized experience to monitor their accounts and receive information. By utilizing the BFS API our customers are free to create whatever apps, portals and experiences they wish in order to strengthen their relationship with their end-clients.

BFS can also automate the process of performing new allocations for end-clients and communicating orders to Nordnet. We are delighted for being able to offer this app from within our marketplace as one of the first add-on applications to BFS.

From the BFS add-on marketplace Bricknode can offer its own add-on apps together with apps from external developers.” said Stefan Willebrand, CEO and Co-Founder of Bricknode.

About Bricknode AB

Bricknode is a young innovative company focusing on financial software. Our mission is to empower our business partners to deliver the best financial products to their end customers and partners in the most efficient way possible.

Bricknode Financial Systems is a cloud-based platform, which makes it possible for securities firms and other financial institutions to establish themselves online.
