

Advenica SecuriCDS Data Diode approved for SALAINEN/SECRET level by Finnish authorities

Advenica's SecuriCDS DD1000i Data Diode receives approval from FICORA (Finnish Communications Regulatory Authority) which can be used for data transfer between networks of different security levels up to the level of SALAINEN/SECRET.

In today's world, many organisations have explicit requirements and needs to ensure data confidentiality or integrity for their information exchange. One type of cybersecurity technology used in such an application is a data diode. Recently, Advenica, a Swedish based cybersecurity solution company, was evaluated and approved for data transfer between networks of different security levels up to the level of SALAINEN/SECRET by The Finnish Communications Regulatory Authority (FICORA) for SecuriCDS DD1000i Data Diode, an Advenica Cross Domain Solution.

SecuriCDS DD 1000i is an integrated device as it is comprised of hardware with built-in proxy services. Advenica's integrated proxies take data protection to a higher level. These proxies are purpose built and tested to meet the requirement for interacting with highly sensitive information.

"The SECRET level approval of our SecuriCDS Data Diode 1000i from FICORA/National Cyber Security Centre validates and strengthens our position as a leading European provider of innovative cybersecurity solutions. We are extremely proud of this endorsement as it opens up new opportunities for Advenica's Cross Domain Solutions, not only in the Finnish market, but also elsewhere."

**Lisa Quinn, Commercial Product Manager,
Cross Domain Solutions, Advenica**
