Obducat confirms delivery approval of the SINDRE® 400 NIL system

OBDUCAT, leading manufacturer of lithography solutions based on nanoimprint lithography (NIL), have received delivery approval, after performing the FAT (Factory Acceptance Test), of the SINDRE® 400 NIL system that was ordered by an Asian customer earlier this year. Installation at customer site is planned to be performed during January.

The delivery approval represents an important milestone that confirms Obducat's leading position and competitiveness. As the LED industry continue to increase production efficiency and quality requirements to lower overall manufacturing costs, the demand for Obducat's NIL technology will increase as a result of the significantly higher performance level compared to optical lithography that is currently the main method being used in the LED industry today.

The delivery approval is expected to give a positive boost on sales to the industry. Thereby we anticipate that we will be able to secure an increased order volume as we move forward and in line with earlier communicated projections, says Patrik Lundström, CEO, Obducat AB.

This is information that Obducat AB (publ.) is required to disclose pursuant to the Swedish Securities Market Act and/or the Financial Instruments Trading Act. The information was submitted for publication on November 28, 2014 at 08.45 CET.
