

PRESS RELEASE
AUGUST 11, 2010

ERICSSON HAS DELIVERED 2 MILLION RADIO BASE STATIONS

- Progress continues toward 50 billion connected devices by 2020
- One million base stations delivered since 2007
- Milestone shows extent of technology and market leadership

It took Ericsson some 20 years to install one million radio base stations as announced in 2007, but it took only three years to deliver the next million. The two millionth radio base station was an Ericsson RBS 6000 unit, delivered today as part of a mobile broadband network expansion project.

Ericsson has led the adoption of mobile broadband technology and has supplied the majority of HSPA networks operating at speeds of 14.4 Mbps or higher. In addition, Ericsson is the only supplier participating in all major 4G/LTE network builds currently underway. Ericsson's mobile network equipment in total already connects well more than 1.5 billion people worldwide.

"Ericsson's milestone delivery is proof of the explosive growth of mobile broadband," said Ericsson's Vice President and Head of Radio Networks Ulf Ewaldsson. "The exponential growth in consumer adoption, data speeds and technology advancements continues to transform the way people communicate. As the world leader in mobile communications, Ericsson is proud of its role in advancing the industry."

A main driver behind the massive acceleration of deliveries is Ericsson's RBS 6000, a multi-standard, energy-efficient base station that supports GSM/EDGE, WCDMA/HSPA and LTE in a single package.

The RBS 6000 series products are available in indoor, outdoor and main-remote packages. Its compact design requires only 25 percent of the space used by previous generations while at the same time increasing capacity by over 10 times. The RBS 6000 series substantially reduces power consumption by 20 to 65 percent, compared to earlier Ericsson radio base stations thereby. They are the most energy efficient and best-in-class base stations available in the industry.

Ericsson is the world's leading provider of technology and services to telecom operators. Ericsson is the leader in 2G, 3G and 4G mobile technologies, and provides support for networks with over 2 billion subscribers and has the leading position in managed services. The company's portfolio comprises mobile and fixed network infrastructure, telecom services, software, broadband and multimedia solutions for operators, enterprises and the media industry. The Sony Ericsson and ST-Ericsson joint ventures provide consumers with feature-rich personal mobile devices.

Ericsson is advancing its vision of being the "prime driver in an all-communicating world" through innovation, technology, and sustainable business solutions. Working in 175 countries, more than 80,000 employees generated revenue of SEK 206.5 billion (USD 27.1 billion) in 2009. Founded in 1876 with the headquarters in Stockholm, Sweden, Ericsson is listed on OMX NASDAQ, Stockholm and NASDAQ New York.
