Q42008

The power of respect. Improving financial performance through quantifying risk. Ormen Lange's need for accuracy. Strengthening Norway's technology cluster. A complete picture of the reservoir. Maximum reservoir performance. Better decision-making at all levels. A business model built on innovation. Turning raw data into information. Integrated Reservoir Production Management system. Securing a sustainable gas supply in Tunisia. Optimizing production. Unlocking productivity in assets and people. Leveraging investments. Excellence. Make sure it's Roxar.

Interim Report +Interim Condensed Financial Information for the period ended December 31 2008

Interim report 4th quarter 2008

Effective 25 July 2007, CorrOcean ASA acquired all the shares of Roxar AS. Subsequently, the name of the company has been changed to Roxar ASA. The 2007 numbers in this report include 5 months of the acquired Roxar AS. Proforma effects from the acquisition of Roxar AS are presented in note 5.

Condensed consolidated income statements

Fourth quarter results

Q4 2008 revenues increased by 23.4% compared to Q3 2008. YE 2008 revenue of NOK 1,365 million represents an increase of 13% over last year. This growth is driven by better performance in most business segments with a particularly strong growth in Topsides metering and software sales.

Q4 2008 operating profit (EBITDA) was NOK 79.0 million, and this represents an increase of 99% compared to Q3 2008. The company had a positive one-off EBITDA effect (non cash) from converting from a defined benefit pension scheme to a fixed contribution pension scheme of NOK 35.6 million. Adjusted for this one-off effect the EBITDA for Q4 is 9.4% higher than previous quarter.

The YE 2008 EBITDA amounted to NOK 219.2 million compared to NOK 112.4 million YE 2007 (proforma), which represents a growth of 95% and a 63% growth if one-off effects are excluded.

The hardware division al-

together saw 23% higher revenue in Q4 2008 than the previous quarter. Particularly promising was that the majority of the growth came from Topside metering and Service. These are markets which generally consist of many and small orders spread across the globe, and give a good representation of the current underlying market activity. Topside and Service revenues increased by 44% and 40% respectively for the whole of 2008 (compared to 2007 proforma numbers) which

indicates a strong underlying market. Subsea had a soft performance for the quarter and the year. However, the Subsea market looks strong and Roxar has announced several orders around the year end, and as such we expect this segment to improve going forward.

Q4 2008 EBITDA for hardware came in at NOK 57.6 million and excluding one-off effects from pension scheme conversion mentioned above, the EBITDA was NOK 34,6 million which represents a growth over previous quarter of 86.4% and 12.0% respectively.

The software division had a strong revenue performance in Q4, with growth of 24.9% over previous quarter. Most encouraging has been the 59% growth

in sales and leases for 2008, which demonstrates the strong demand for Roxar's software solutions. YE 2008 revenues amounted to NOK 372.0 million, and this represents an increase of 32% compared to same period in 2007 (proforma). The software Q4 EBITDA of NOK 29.4 million was weaker than expected, and adjusted for one-off effects from pension scheme conversion mentioned above, the EBITDA was NOK 20.3 million. There is not one single explanation for the weaker margin in Q4, but the majority of factors relates to higher cost of sales and accruals of bonus/ sales commissions to employees. YE EBITDA came in at NOK 102.5 million, and adjusted for one-off effects the EBITDA was NOK 93.4 million, which gives a margin of 28% and 25% respectively.

Interim report 4th quarter 2008

Operations and outlook

The market for Roxar's products

Net financial cost in Q4 2008 amounted to NOK 197.9 million compared to a net financial cost of NOK 102.9 million in Q3 2008. Most of this shortfall stems from a NOK 146 million unrealised loss related to the USD debt, see note 3 for details. For 2008, Roxar had a net financial cost of NOK 307.9 million, of which NOK 140.7 million is related to unrealised loss on USD debt.

The company's USD denominated debt is reduced from USD 184 million to USD 102.6 million throughout 2008. The conversion of USD debt to NOK debt was done at favourable exchange rates. Hence, in spite of the latest strengthening of the USD, the company's total debt is, when converted to NOK, the same as at the time the company was refinanced in the summer of 2007. Over time, a strengthening of the USD/NOK ratio will have a positive effect on Roxar's operating profit.

Operating cash flow from Q4 2008 was NOK 65.5 million compared to NOK 61.7 million for Q3 2008. YE 2008 operating cash flow increased by 32% compared to YE 2007. YE 2008 operating cash flow of NOK 198.3 million compared to EBITDA adjusted for non cash pension effect of NOK 183.7 million is a strong performance, particularly when the revenue growth for 2008 was 13%.

Net cash was reduced by NOK 10.6 million in Q4 2008, including repayment of debt of NOK 28.9 million. Net cash for full year 2008 was reduced by NOK 39.7 million, including debt instalments and acquisition of PolyOil Ltd. Roxar focus continuously on optimising cash flows, however, we will see cash flows continue to fluctuate somewhat as a result of changes in activity levels and product mix.

Overall

has been relatively stable with a positive underlying growth in 2008. In particular, we have seen a weaker than expected growth in the Subsea market, predominantly as a consequence of delays in schedule on major projects. The underlying positive trend is that nearly all areas of Roxar, with the exception of Subsea, showed positive growth in 2008. Subsea projects often consist of large and binary contracts, whilst the rest of Roxar's business consists of smaller orders scattered over the entire globe. The growth seen in Topside, Downhole and Software sales therefore demonstrates a strong and global demand for Roxar's technology.

The growth in Service revenue demonstrates the company's ability to grow its global organisation and execute its business plans to take advantage of the underlying market growth.

In general, Roxar has never had a stronger strategic position, with a wide product portfolio, a proven track record and a long standing business relationship with its clients.

Hardware Division (proforma discussion)

Topside

Topside metering grew by 44% in 2008. Generally, the topside market consists of many small orders and potentially a few large orders in Saudi Arabia. The growth observed in Topside this year comes without any large contracts in Saudi Arabia. Roxar has been effective throughout the year in securing orders and holding on to its dominant position in a growing global market. Future technology adaptation is expected to take place in the global client base.

The topside market in general may be impacted by deferral of some projects with large OPEC producers, but this should have a smaller effect on Roxar sales. Roxar's large and global client base is expected to continue its technology adoption in 2009 and 2010 as Topside instrumentation investments are relatively small, and payback fast and significant.

Subsea

The Subsea market has been relatively soft for the last 18 months, predominantly due to delays in projects. Roxar has seen an increase in orders throughout second half of 2008 and we observe a strong underlying market. The market has come from a situation with strong underlying growth and a growing latent demand as a result of delays. The financial crisis must be expected to impact projects

with smaller operators, which depend on the financial market for financing. However, we believe that the latent demand, underlying growth and increased technology adoption will more than outweigh any impact of financial turmoil in 2009 and 2010.

Downhole

The target for the Downhole business in 2008 was to consolidate the nearly 50% growth the business had in 2007. The 4% revenue growth for 2008, means that this target was met. The Downhole business has become more geographically diversified and works on longer term contracts. The business also has a strong technology development pipeline and continued growth is expected as a result of this.

Services

The hardware service business had a 40% growth in revenue for 2008. The business had a new record performance in Q4 2008 and business growth has historically been limited by our ability to grow the global organisation. During 2007 and 2008, the company experienced high turn over rates on personnel which limited growth, as global employment markets overheated. We expect a strong market in 2009 and believe that turn over rates on personnel will fall as the employment markets cool down.

.....

License sales and leases

Licence sales and leases grew by 59% in 2008. The growth experienced has come from regions where Roxar is strong, like CIS and Scandinavia, but other growth regions such as Asia and South America have been even stronger contributors to the growth in 2008. The sales growth stems from clients who are facing more challenging reservoir issues coupled with strong expectations to Roxar's RMS 2009 release.

Maintenance

sales, maintenance revenue has historically remained relatively flat as more clients have converted from purchase of software licences to lease of software. In 2008, maintenance revenue increased by 14%, which has buckled this old trend. The growth in maintenance is linked to the sales growth as well as from older clients who enter into new maintenance contracts and therefore pay back maintenance. The trend with older clients turning maintenance back on can only be due to strong expectations in the market place to the RMS 2009 release in January 2009.

In spite of improved software

Services

Software Division (proforma discussion)

The service activity was up 16% for 2008, following a slow start. New management and the introduction of a service improvement programme has so far resulted in service revenue in the second half of 2008 which was 47% better than first half of the year. As a result of improved staff utilisation and a strong market, we now observe a shortage of staff in this business.

Stavanger, 19 February 2009 The Board of Directors Roxar ASA

Questions should be directed to Roxar ASA management represented by:

Gunnar Hviding, CEO Even Gjesdal, CFO

The power of respect. Improving financial performance through quantifying risk. Ormen Lange's need for accuracy. Strengthening Norway's technology cluster. A complete picture of the reservoir. Maximum reservoir performance. Better decision-making at all levels. A business model built on innovation. Turning raw data into information. Integrated Reservoir Production Management system. Securing a sustainable gas supply in Tunisia. Optimizing production. Unlocking productivity in assets and people. Leveraging investments. Excellence. Make sure it's Roxar.
