

PRESS RELEASE

Expanded embedded Linux training portfolio from Enea

Enea completes your software investment as a Linux Foundation Authorized Training Partner

STOCKHOLM, Sweden, June 4, 2014. Enea (NASDAQ OMX Nordic: ENEA), a leading operating system solution vendor for telecom infrastructure equipment, today announced its partnership with the Linux Foundation concerning embedded Linux training courses. Enea is one of four announced training partners to date, and can thereby offer Linux professionals the full range of Linux Foundation courses, in addition to its own training curriculum.

Enea's existing Linux and open source training offering already includes training on the Yocto Project™, open source licensing, Linux real-time optimization, and kernel module development. It is now complemented with valuable additions from the Linux Foundation training program e.g. device driver optimization, development under GIT, and Android development.

"As a part of our ever-increasing commitment to improving our Embedded Linux offering, we are proud to announce this partnership with the Linux Foundation", said Daniel Forsgren, SVP Product Management, Enea. "Enea can now offer the broadest Linux training portfolio on the market, to the benefit of our customers."

By adding the Linux Foundation training to Enea Linux and its world class support and customized services, Enea becomes an even stronger and more complete embedded Linux distribution and service provider partner to rely on.
