

## **Press release**

Stockholm September 5, 2017  
(NASDAQ First North: DOME)

### **Dome Energy gives operational update; drilling program in Illinois Basin and Hurricane Harvey**

[Dome Energy AB](#). (herein after "Dome" and/or "the Company") announces the commencement of the drilling program in the Illinois basin.

Paul Morch, CEO: "Our drilling operations has commenced, with target of drilling four wells over the next couple of months. Current depth for the Glaze 11-10 is 2,900ft, with a target depth at 4,200ft. Once we have reached our target, we will log the well and start the second immediately thereafter. By the end of September, we should have the first two wells drilled and completed with fracture stimulation. Flow-back is expected to take up to 30 days before we reach peak production for each well. Once we start flowing the wells, we will move over to the next two wells. We will continue to update the market with our development.

Texas was hit by one of the worst hurricanes in US history late August, the Hurricane Harvey. Dome personnel was prepared for the worst and managed to shut in our fields without seeing any damage. We expect limited economic consequences from this catastrophe, and we hope to be 100% back on production later this week."
