IAR Systems extends unique security offering through Secure Thingz' Secure Desktop Provisioner

Stockholm, Sweden—February 20, 2020—IAR Systems Group AB (publ) ("IAR Systems") announces today that the company, through its subsidiary Secure Thingz, is launching the new product Secure Desktop Provisioner.

In the creation of secure IoT devices, it is important that critical information such as application code, security features and production counters are fully protected throughout the complete development and production flow. Developing with security built-in is essential, but there is also need for a secure deployment and provisioning flow to enable complete protection against attacks, cloning, counterfeiting and over production. The Secure Desktop Provisioner makes provisioning straight forward and provides every programmed device with a unique identity, enabling developers to securely provision prototypes and low production volumes.

 "For the first time, a security solution that encompasses both development and production is available", says Haydn Povey, CEO Secure Thingz. "With the Secure Desktop Provisioner we deliver secure provisioning to the desk of developers globally. This provides them with the right tools to develop applications with security properly integrated and enable a secure framework for initial production."

Secure Thingz and IAR Systems provide the Security from Inception Suite, a unique set of tools, services and training to aid companies in ensuring they are successful in implementing the right level of security for their specific needs. Security from Inception Suite enables developers to make the first critical step by building security into their designs ready for production. The Secure Desktop Provisioner has now been added as a critical component, making it possible to take the second step of securely transferring those designs to a production environment to produce prototypes and first articles that fully implement the designed security features.

##Ends

About IAR Systems

IAR Systems supplies future-proof software tools and services for embedded development, enabling companies worldwide to create the products of today and the innovations of tomorrow. Since 1983, IAR Systems' solutions have ensured quality, reliability and efficiency in the development of over one million embedded applications. The company is headquartered in Uppsala, Sweden and has sales and support offices all over the world. Since 2018, Secure Thingz, a provider of advanced security solutions for embedded systems in the IoT, is part of IAR Systems. IAR Systems Group AB is listed on NASDAQ OMX Stockholm, Mid Cap.
