IAR Systems updates development tools for RISC-V

Support for new technology enabled by strong partnership with Andes Technology Corporation

Stockholm, Sweden—June 4, 2020— IAR Systems today announces initial support for the draft RISC-V P extension in its powerful development tools IAR Embedded Workbench for RISC-V. Thanks to this early support for the extension as implemented by Andes Technology, a Premier Founding member of RISC-V International, developers are able to take advantage of a leading development toolchain when starting to develop applications based on the new RISC-V core extension.

“Andes is a strong and active player in the RISC-V community, and together we have a lot to offer with regards to performance,” says Anders Holmberg, General Manager Embedded Development Tools, IAR Systems. “By jointly supporting the P extension, we bring extended possibilities for powerful RISC-V development and add new ways to optimize application and hardware performance.”

RISC-V is a free and open instruction set architecture (ISA) based on established Reduced Instruction Set Computing (RISC) principles. In 2019, IAR Systems launched development tools for RISC-V. More information about the development tools is available at www.iar.com/riscv.

About IAR Systems

IAR Systems supplies future-proof software tools and services for embedded development, enabling companies worldwide to create the products of today and the innovations of tomorrow. Since 1983, IAR Systems' solutions have ensured quality, reliability and efficiency in the development of over one million embedded applications. The company is headquartered in Uppsala, Sweden and has sales and support offices all over the world. Since 2018, Secure Thingz, a provider of advanced security solutions for embedded systems in the IoT, is part of IAR Systems. IAR Systems Group AB is listed on NASDAQ OMX Stockholm, Mid Cap.
