STOCKHOLM, 1 OCTOBER 2018

RaySearch releases a new version of the RayCare oncology information system

RaySearch Laboratories AB (publ) has released RayCare 2B*, the latest version of the groundbreaking oncology information system (OIS). RayCare is designed to support the workflow in a modern oncology center, connecting the different oncology disciplines, boosting efficiency and ensuring optimal use of resources.

RayCare is developing rapidly with clinical input from some of the leading cancer centers worldwide, and this is the second of three releases during 2018.

The first clinical version of RayCare was released in December 2017, and Iridium Cancer Network in Belgium started using it clinically after only two months. Provision CARES Proton Therapy Center in Nashville, USA, has been using RayCare together with RayStation to manage their patients since opening of the center in July this year.

RayCare 2B introduces new features and usability improvements throughout the system, including a feature to support a full treatment delivery and management workflow and task-based offline image review. Other care administration features include support for financial information, such as insurance information and authorization management, and support for managing external contacts, referring clinicians and other external entities.

Johan Löf, CEO of RaySearch, says: "The latest release of RayCare is an important step on the road we are paving for this OIS. The pace of the releases is set to support our clinical partners with a continuously strong development, redefining what an OIS is capable of."

About RayCare

RayCare represents the future of OIS technology, developed from the ground up by RaySearch to support the complex logistical challenges of modern, large-scale radiation therapy centers. RayCare will integrate the high-performance radiation therapy algorithms available in RayStation with advanced features for clinical resource optimization, workflow automation and adaptive radiation therapy.

About RayStation

RayStation integrates all RaySearch's advanced treatment planning solutions into a flexible treatment planning system. It combines unique features such as multi-criteria optimization tools with full support for 4D adaptive radiation therapy. It also includes functionality such as RaySearch's market-leading algorithms for IMRT and VMAT optimization and highly accurate dose engines for photon, electron, proton and carbon ion therapy. The system is built on the latest software architecture and features a graphical user interface with state-of-the-art usability.

About RaySearch

RaySearch Laboratories AB (publ) is a medical technology company that develops innovative software solutions for improved cancer treatment. RaySearch markets the RayStation treatment planning system and the RayCare oncology information system to clinics all over the world and distributes products through licensing agreements with leading medical technology companies. RaySearch's software is used by over 2,600 clinics in more than 65 countries. The company was founded in 2000 as a spin-off from Karolinska Institute in Stockholm and the share has been listed on Nasdaq Stockholm since 2003.
