
PRESS RELEASE

STOCKHOLM, JANUARY 31, 2024

RayStation in more than 1,000 radiotherapy centers worldwide

RaySearch Laboratories AB (pub) is proud to announce that the number of radiotherapy centers that have chosen RayStation® for treatment planning now exceeds 1,000. The first version of RayStation was launched in 2009 and the system is now available in cancer centers in 43 countries worldwide.*

The United States has the largest number of RayStation centers with more than 285 customers, followed by Japan, with around 220 centers, and China, where around 90 centers have bought RayStation.

The first ever customer for RayStation was Westdeutsches Protonentherapiezentrum Essen (WPE)

in Germany, who bought RayStation in 2009. Treatment planning for ions (for example protons, carbon ions and helium ions) has continued to be a very important market and by constantly being at the forefront and launching ground-breaking functions, RaySearch is today the market leader in this segment with around 110 centers as customers.

Since the launch, two important driving forces have been guiding stars in the development of RayStation; to offer the market's most advanced treatment planning system and for RayStation to support all available treatment machines. Today, no other treatment planning system supports such a wide range of treatment techniques and delivery systems as RayStation does.

The latest in the line of centers that has chosen RayStation is Shri Devaraj Urs University of Higher Education and Research in Karnataka, India.

Johan Löf, founder and CEO, RaySearch: "This is an important milestone for RaySearch. We have invested significant resources in developing the by far most advanced treatment planning system, with support for almost all available treatment machines. Today, we see that our efforts have paid off with over 1,000 centers who have purchased RayStation. I also note with pride that ten of the fifteen highest ranked cancer hospitals in the world, according to a ranking by Newsweek, are current customers of ours. This reflects our strong position also in the top segment and confirms RaySearch as a leading vendor of high-quality cancer treatment."

About RaySearch

RaySearch Laboratories AB (publ) is a medical technology company that develops innovative software solutions for improved cancer treatment. RaySearch markets the RayStation®* treatment planning system (TPS) and the oncology information system (OIS) RayCare®*. The most recent additions to the RaySearch product line are

RayIntelligence® and RayCommand®*. RayIntelligence is an oncology analytics system which enables cancer centers to collect, structure and analyze data. RayCommand, a treatment control system (TCS), is designed to link the treatment machine and the treatment planning and oncology information systems.

RaySearch's software has been sold to over 1,000 centers in more than 43 countries. The company was founded in 2000 as a spin-off from the Karolinska Institute in Stockholm and the share has been listed on Nasdaq Stockholm since 2003. More information is available at raysearchlabs.com.

About RayStation

RayStation®* is a flexible, innovative treatment planning system, chosen by many leading cancer centers worldwide. It combines unique features such as unmatched adaptive therapy capabilities, multi-criteria optimization, market-leading algorithms for treatment plan optimization for HDR brachytherapy and external beam therapy with photons, electrons, and protons, as well as helium and carbon ions. RayStation supports a wide range of treatment machines, providing one control center for all treatment planning needs and ensuring centers get greater value from existing equipment. RayStation also seamlessly integrates with RayCare®*. By harmonizing the treatment planning, the care of cancer patients worldwide is improved.
