STOCKHOLM, APRIL 17, 2024

## Raigmore Hospital in Scotland selects RayCare

*RaySearch Laboratories AB (publ) is pleased to announce that Raigmore Hospital in Inverness, Scotland has placed an order for the oncology information system RayCare®\*.*

The radiotherapy center at Raigmore Hospital is the northernmost center for radiotherapy in the UK, treating close to 1,000 patients per year. The center has two Varian Truebeam® linear accelerators and has been using RayStation clinically since 2016.

Raigmore Hospital is currently using an older version of ARIA from Varian Medical Systems as their oncology information system. The existing system needs to be upgraded or replaced. After an extensive evaluation the center has decided to select RayCare as their new, sole oncology information system. RayCare will cover the full patient pathway including treatment delivery using the Varian Treatment Interface for connecting RayCare to the Varian treatment console. The implementation will start during the summer and the center will use the advanced workflow engine of RayCare for creating clinic specific workflows, with the aim of a complete clinical implementation in the beginning of 2025.

The radiotherapy center at Raigmore Hospital is a very busy cancer center facing the pressure of an increasing number of patients. Key for the center in the selection process was efficient scheduling, workflow support, smooth integration with the existing treatment planning system, and automation using scripting.

Steven Colligan, Head of radiotherapy physics, Raigmore Hospital, says: “We have used RayStation since 2016 and look forward to the introduction of RayCare to the department. As well as the improved integration with RayStation that it will provide, we were impressed with the automation of tasks which has the potential to improve the workflows. The possibility of using scripting as we do in RayStation further enhances this ability. We also see great potential to improve the communication and documentation which is currently fragmented across a number of different systems.”

Johan Löf, founder and CEO, RaySearch, says: “Our installed base of RayCare customers is steadily increasing and I am happy to welcome Raigmore Hospital as a new RayCare customer. I am impressed by the center’s efficient use of RayStation and the fact that they now have selected RayCare will further improve their efficiency. I am looking forward to working with the team at Raigmore Hospital for a smooth transition.”

The order value is GBP 730,000 (approximately SEK 9.7 million), excluding service contract, which will be recognized as revenue in the beginning of 2025.

### About Raigmore Hospital

Raigmore Hospital is the District General Hospital serving the population of the Highlands in Scotland. Raigmore Hospital provides acute health services as well as covers all specialties and is a training hospital for Nursing and Medical staff. It is also a regional Cancer Centre.

### About RaySearch

RaySearch Laboratories AB (publ) is a medical technology company that develops innovative software solutions for improved cancer treatment. RaySearch markets the RayStation®\* treatment planning system (TPS) and the oncology information system (OIS) RayCare®\*. The most recent additions to the RaySearch product line are RayIntelligence® and RayCommand®\*. RayIntelligence is an oncology analytics system which enables cancer clinics to collect, structure and analyze data. RayCommand, a treatment control system (TCS), is designed to link the treatment machine and the treatment planning and oncology information systems.

RaySearch's software has been sold to over 1,000 centers in 43 countries. The company was founded in 2000 as a spin-off from the Karolinska Institute in Stockholm and the share has been listed on Nasdaq Stockholm since 2003. More information is available at [raysearchlabs.com](http://raysearchlabs.com).

### About RayCare

The RayCare®\* oncology information system (OIS) is designed to support the many complex logistical challenges faced by today's oncology clinics. RayCare is closely integrated with RayStation®\* and provides seamless access to all the powerful planning tools in RayStation and RayCommand®. The system efficiently coordinates activities in radiation therapy and offers advanced features for clinical workflow automation, and adaptive radiation therapy. RayCare responds to the demand from clinics for a more user-friendly and workflow-oriented information system that can support the cancer care of the future.

*\* Subject to regulatory clearance in some markets.*
