

## **Nurminen Logistics is developing its project logistics service**

**Nurminen Logistics is strengthening its investment in project logistics and streamlining its services by launching a separate business line for its project logistics services.**

**Pasi Kuusijärvi** has been appointed as the director of the business line as of 10 February 2015. Before his new post, Kuusijärvi acted as sales manager at the Special Transports and Projects business unit. **Hannu Vuorinen**, Senior Vice President, Special Transports and Projects continues to be responsible for special transports at Nurminen.

– The focus of our project logistics lies more and more on comprehensive logistics solutions and delivery services that cover the customer's entire process, from customer's product sales to final delivery. We will rely heavily on the vast potential of our in-house logistics services, and will offer project logistics primarily in the current geographical operating area of Nurminen Logistics. Having a harmonious project logistics organisation and operating model in all our operating countries will guarantee our ability to meet and exceed current and future project logistics challenges, Kuusijärvi, the newly elected Director of the business line says.
