KADHO RELEASES THE WORLD'S FIRST INTERACTIVE LANGUAGE IMMERSION EBOOK WITH CULTURAL SONGS

Kadho's First Free eBook, "Mochu Says Goodnight," Allows Parents to Begin Teaching Spanish, French, Italian and English to Babies and Toddlers

Irvine, CA (May 20, 2015) – Once upon a time, parents read from a storybook or made up a tale when tucking children in bed. Wishes for sweet dreams and a kiss on the forehead was all that was necessary for slumber. Nowadays, brain research shows those moments before bed are a wonderful time to learn the key sounds for Italian, Spanish, French or English! Kadho, the educational tech company that wants to make every early moment matter, introduces its first eBook, *Mochu Says Goodnight*.

Now ready for free download on [iPhone](#), [iPad](#), [iPod touch](#), [Android](#) and [Kindle](#) devices, this sweet story of Mochu the Penguin hides some very important components – the key sounds for emerging foreign and native languages. You say cat and another mother on the other side of the globe says *chat* or *gato*. Because newborns through preschoolers have the ability to hear and pick up sounds, their brains keep these early language lessons and use them later in life – like 6th grade Spanish class!

The illustrations and sounds of the eBook take tots on a short journey as caregivers can read, play and sing along with baby. With Kadho's amazing brain-nourishing music, hidden sounds and adorable characters, the eBook complements the game App Mochu Pop launched by Kadho earlier this month. Together or alone, these science-influenced stories and games introduce the basic phonology for English and other foreign tongues.

Kadho explains on its website, www.Kadho.com, by age 3, about 85 percent of the wiring in children's brains has already been formed. Telling the same story night after night comes with a prize – an abundance of brain connectors for future language learning.

ABOUT KADHO

Kadho was founded by two PhDs and backed by a strong network of early childhood educators, neuroscientists, linguists and child psychologists. Kadho Inc. is utilizing the last 50 years of brain science to develop games and eBooks to maintain and enhance the innate abilities that children are born with. Kadho is proudly incubated at [EvoNexus](#). For more information, visit their informative website, www.kadho.com.
