

**PRESS RELEASE**

February 25, 2019 – Oslo, Norway

## **Press release: Nel signs MoU together with industry group to develop and test hydrogen fueling hardware for heavy duty vehicles**

Nel has together with Air Liquide, Hyundai, Nikola Motor, Shell and Toyota signed a Memorandum of Understanding (MOU) for hydrogen fueling components, for the purpose of testing state of the art heavy duty (HD) hydrogen fueling hardware to assist in standardization and speed to market for fuel cell electric trucks.

This cross-industry group of both vehicle and infrastructure companies has signed an MOU with the purpose to test pre-commercial 70MPa hydrogen heavy duty vehicle high flow (H70HF) fueling hardware for future Class 8 (40 Ton) trucks. The industry group has created specifications for the fueling nozzle, vehicle receptacle, dispenser hose and breakaway device components for this HD application for the purpose of developing Request for Proposals to suppliers.

This industry group is requesting notification of suppliers' intent to participate in a pre-commercial development and test program designed specifically for this fueling hardware. The fueling hardware samples will undergo performance tests in accordance with the appropriate SAE/ISO/CSA industry standards along with additional aspects for this emerging market.

"Heavy Duty Fuel Cell Trucks offer the same range as their conventional Diesel counterparts and fueling hardware is being developed to fill in 10 minutes. Key members of the industry have joined forces to evaluate HD Fueling Hardware to make this a reality. The goal is to enable interoperability so that any HD FCEVs can fuel at our hydrogen stations and we can fill at any of theirs, just like diesel today. This is a big first step," said Jesse Schneider, executive vice president, Nikola Motor, Hydrogen & Fuel Cell Technologies.

"Hydrogen as fuel for the Heavy Duty transport sector is showing great promise and traction, and we are now in the process of developing the next generation, high capacity stations for this segment. In order to enable commercial success for this segment, standardization of fueling hardware is a key" says Jørn Rosenlund, SVP of Nel Hydrogen Fueling.

**About Nel Hydrogen | [www.nelhydrogen.com](http://www.nelhydrogen.com)**

Nel Hydrogen is a global, dedicated hydrogen company, delivering optimal solutions to produce, store and distribute hydrogen from renewable energy. We serve industries, energy and gas companies with leading hydrogen technology. Since its origins in 1927, Nel has a proud history of development and continual improvement of hydrogen plants. Our hydrogen solutions cover the entire value chain from hydrogen production technologies to manufacturing of hydrogen fueling stations, providing all fuel cell electric vehicles with the same fast fueling and long range as conventional vehicles today.
