Mobile Signage for Maximum Impact

Dynamic and highly visual, thanks to their bright yellow colour and familiarity as traffic information displays, variable LED message signs (VMS) are a great attention grabber.

Messagemaker's compact trailer mounted VMS now provide even greater flexibility. With fast deployment as required, the new Compact VMS helps get the message across wherever and whenever you need to – in full colour.

The latest addition to Messagemaker's VMS range, the mobile LED Signs are perfect for launching new products, promoting special offers, announcing up to date information at events and festivals, displaying information at sporting events, advertising vacancies, and much, much more.

Around half the size of standard trailer signs, the Compact Trailer Mounted VMS provides a highly portable messaging solution offering an eye-catching full colour matrix display, allowing not only text messages but also symbols and graphics to be incorporated for maximum impact.

Available in different pixel resolutions, the Compact Trailer Mounted VMS signs are easily accessible to control and update via 3G and supplied with integrated security systems, plus solar or 230V mains power options for maximum flexibility in use.

With the ability to update the signs quickly, businesses and organisations can react quickly and efficiently to changing circumstances and provide up to the minute news, information and promotional messages.

For more information on Messagemaker's compact trailer VMS signs please visit <http://www.messagemaker.co.uk/variable-message-signs> or call 0800 170 7780.
