

Two RescueRunner systems ordered by Redningsselskapet in Norway

Redningsselskapet is expanding its lifesaving fleet with a new order for two additional RescueRunner systems.

Redningsselskapet in Norway has placed an order for two additional RescueRunner systems to further strengthen its rescue fleet.

The RescueRunner system is a highly flexible and efficient boat system designed to operate in shallow and inaccessible waters where larger vessels cannot reach. With its exceptional buoyancy and stability, the RescueRunner is the perfect complement to integrate with larger mother vessels.

“We are very grateful for our strengthened collaboration with Redningsselskapet. We are confident that the two new RescueRunner systems will be a valuable asset in their lifesaving operations at sea,” says Lukas Brehm, Vice President at Safe at Sea.

The RescueRunner systems will be delivered during Q1 2026.

The order value is approximately SEK 1,240,000.
