

# Salvamar Service SRL Strengthens Its Fleet with an additional SafeRunner-System

We are happy to announce that our Romanian sales partner, Salvamar Service SRL, is investing in a SafeRunner-System for the coming season

Safe at Sea's Romanian sales partner, Salvamar Service SRL, has chosen to further strengthen its operational capabilities by investing in another SafeRunner system to meet the demands of the upcoming season.

The SafeRunner is a powerful and versatile entry-level system, specifically developed for lifeguard operations in environments that are less extreme but still require high reliability and operational efficiency. The system is based on a dependable Yamaha WaveRunner, equipped with an integrated rear rescue platform and a durable rigid hypalon tube that provides excellent stability and buoyancy in demanding conditions.

“It is very encouraging to see our partner in Romania continue to strengthen its operations. We hope that this SafeRunner system will become a valuable asset on beaches across Romania,” says Lukas Brehm, Vice President at Safe at Sea AB.

The SafeRunner system is scheduled for delivery during Q3 2026.

The order value is approximately SEK 345,000.
