CLS signs agreement with Siemens Healthineers to secure optimal interfacing to the world leading portfolio of Magnetom MRI scanners from Siemens Healthineers

Clinical Laserthermia Systems AB (publ) (CLS) and Siemens Healthineers have signed an agreement that gives CLS the right to license the “Access-i” software solution from Siemens Healthineers in order to connect and interface CLS products with Siemens’ Healthineers Magnetom Scanners.

“The Access-i software and the agreement with Siemens Healthineers is yet another step towards CLS’s goal to build the next generation of integrated, workflow-optimized solutions for precision ablation,” said Dan Mogren, Chief Commercial Officer at CLS. “The realization of the agreement, which includes products and services supplied by Siemens Healthineers, will simplify and make a certain level of standardization of interfacing possible. The new product will enable CLS to offer a complete solution for therapeutically challenging soft tissue applications, including laser ablation of deep brain structures, and immune stimulating imILT® treatment of cancer,” continued Mogren.

“With the agreement in place, CLS can start the work on interfacing the MR thermometry software, developed in collaboration with our partner Image Guided Therapy (IGT), to the world leading Magnetom Scanner portfolio of Siemens Healthineers. I’m very pleased to be cooperating with both Siemens Healthineers and IGT in this exciting development project,” commented Stephan Dymling, CTO at CLS.

Access-i is a commercial software from Siemens Healthineers that is fully compatible with the company’s Magnetom Scanner portfolio and allows 3rd party device integration through interactive remote control and data access. CLS will utilize Access-i to optimize real time thermometry imaging during MR guided laser ablation procedures.
