

## Two additional ClearPoint™ Prism systems installed in the U.S.

**Lund, Sweden – Clinical Laserthermia Systems AB (publ) (“CLS” or “the Company”) today announces that its global distributor within neurosurgery ClearPoint Neuro Inc. installed two additional ClearPoint Prism™ Neuro Laser Therapy Systems in the U.S. In total, there are now three of the company’s system for MR-guided laser ablation installed on the American neurosurgery market.**

CLS’s global distributor ClearPoint Neuro Inc, continues the limited market release in the U.S. of ClearPoint Prism Neuro Laser Therapy System, which is the new brand name for the laser ablation system for MR-guided procedures in the brain. During the first quarter, ClearPoint Neuro Inc. installed two additional systems on the American market, which makes a total of three established systems at leading neurosurgery centers in the U.S.

“We expect to remain in limited market release throughout 2023 as we gain experience with the system across multiple sites and surgeons, but also with different scanners and different patient indications such as brain tumors and drug resistant epilepsy. These cases will help build our educational tools ahead of the upcoming, broader release in 2024,” said Joseph Burnett, President & CEO, ClearPoint Neuro, Inc.

“We are very pleased with the team at ClearPoint Neuro and with their achievements establishing the Prism Neuro Laser Therapy System for MR-guided NeuroLITT procedures on the American market. The team at CLS is also very much involved providing on-site product training and technical support, as well as collecting user feedback towards the upcoming broader release next year.” said Dan J. Mogren, CEO, Clinical Laserthermia Systems AB.

In addition to the commercial launch in the US, there is an ongoing clinical trial with ClearPoint Prism Neuro Laser Therapy System at Skåne university hospital in Lund, Sweden. The primary purpose is to collect clinical data which is to be used for submission of market approval in Europe. The clinical study was recently extended and an additional up to 10 glioblastoma patients will be treated.
