PHI Focuses on Biomanufacturing — Appoints New CEO and Chairman

The Board of Directors of Phase Holographic Imaging (PHI) has appointed the company's CFO, Patrik Eschricht, as the new CEO. In addition, the former CEO and founder of PHI, Peter Egelberg, has been appointed executive chairman of the Board. The former chairman, Mats Lundwall, will remain on the Board as vice chairman.

Peter Egelberg:

As executive chairman, I will focus on strategic partnerships. Transforming healthcare by industrializing regenerative medicine and the manufacturing of cell-based therapies is an ambitious project. Besides academic alliances, it will require industrial and regulatory partnerships involving major software companies, life science tools companies and regulatory agencies.

Patrik Eschricht:

With my previous background in senior positions in companies during rapid growth, I feel well equipped to take on the daily leadership and drive the two objectives the Board has presented me with: further increase sales and develop PHI's HoloMonitor technology in regenerative medicine. Together with our partners, we are setting the standards for automated quality control systems in regenerative medicine.

Phase Holographic Imaging (PHI) develops instrumentation and software for time-lapse cytometry. The products are used for long-term quantitative analysis of the dynamics of live cells, particularly significant in the research of cancer, as well as in the treatment of inflammatory and autoimmune diseases. The products are sold globally through the company's distributors. The company is based in Lund, Sweden, and in Boston, Massachusetts.
