VibroSense Dynamics: Region Skåne ordered two VibroSense Meter devices

Skånes University Hospital purchases two VibroSense Meters, a medical device for assessment and diagnosis of tactile sensitivity in hands. The order value exceeds SEK 250 000. The devices will be used at two clinics in the Department of Clinical Neurophysiology in Malmö and Lund, Sweden.

The order means that the Department of Clinical Neurophysiology at Skånes University Hospital in Malmö/Lund will expand their range of diagnostic examinations and thus improve their capability to help patients with diseases that affects the nervous system.

The two clinics are responsible for neurophysiology diagnostics in the southern healthcare region in Sweden. This means that patients, not just from Lund and Malmö, but also from hospitals in Helsingborg, Kristianstad, Trelleborg, Ystad, Karlskrona, Växjö and Halmstad, may be examined.

- This is a prestigious order which confirms that our products have a great potential in a variety of areas within Health Care organizations. Not least, this shows that we are now ready to approach more clinics in Sweden and in Europe, since we now have a strong reference customer, says Ulf Rogers, Marketing Director at VibroSense Dynamics AB.

The company has previously identified that Neurophysiological Clinics are an important customer group for VibroSense Dynamics. VibroSense Dynamics has a CE-approved device for the examinations and diagnosis of impaired sensitivity in hands.

- This order increases the credibility of our concept since the neurophysiological departments are superior in terms of diagnosis of neuro-associated clinical problems, says Göran Lundborg, Professor Emeritus in the Department of Hand Surgery at Skånes University hospital.
