

## Akademiska sjukhuset buy DrugLog®

**Pharmacolog has received an order on a DrugLog® system from the Akademiska sjukhuset in Uppsala, Sweden. The system will be used for quality assurance of the installed compounding robot at the newly established Centrala Beredningsenheten.**

Akademiska sjukhuset in Uppsala purchase DrugLog® to carry out production qualification of the acquired compounding robot, which means that validations are carried out using a stand-alone equipment. The hospital will take over the extempore drug production of medicines on its own when the agreement with an external party expires in 2019 and has therefore established a new pharmaceutical unit. Drug preparation will be done using a processing robot in a new department called CBE, Central Beredningsenheten. The DrugLog® system will be delivered before the turn of the year and revenue will be taken in 2018.

CEO Mats Högberg comments: "We are very pleased to deliver a DrugLog® to our 'home hospital'. We have several interesting ongoing collaborations with Akademiska and look forward to collaborating with the newly established processing unit. Academic will receive state-of-the-art drug handling where patient safety, good working environment and rational methods of preparation have been a loadstar when designing the new department. DrugLog® has a given place in such an activity and will set a new standard for efficient and patient-safe drug preparations. "
