

Princess Máxima Center purchases DrugLog®

Princess Máxima Center in Utrecht, The Netherlands, have ordered a DrugLog® system to be used for quality assurance of two compounding robots that are used for reconstitution of cytostatic drugs. The order will be booked in the first quarter.

The recently opened Princess Máxima Center (PMC) is a unique hospital, being the biggest pediatric oncology center in Europe. The new center brings together all the highly complex care and research for children with cancer in the Netherlands. Around 600 children in the Netherlands get cancer every year. The Hospital Pharmacy will take care of most of the drug preparations to the ward departments at the center and for that purpose they have bought two IV robots that will prepare drugs in an automated manner. To perform daily quality control tests contributing to the quality assurance of the robots the pharmacy department also decided to buy a DrugLog® device.

Kent Öbrink, Sales & Marketing Manager commented: "I am happy and honored to sign the first DrugLog® order in the Netherlands. PMC will serve as a role model for other European countries interested in this concept of treating childhood cancer in one place. It is also proof that our DrugLog® has an important role to play in modern drug preparation. PMC will act as an important reference institution for not only the Dutch market but for the whole of Western Europe."

Rogier Lange, Hospital Pharmacist and Head of the Compounding Department of the Pharmacy commented: "We are convinced that the DrugLog will play an important role in the quality assurance of our IV robots. Moreover, we see possibilities for using DrugLog® in the personal qualification of personnel for manual preparation."
