

Pharmacokinetics is the study of the movement of drugs within the body. It is a branch of pharmacology that deals with the absorption, distribution, metabolism, and excretion of drugs. The study of pharmacokinetics is essential for understanding the relationship between the dose of a drug and its effect on the body. It is also important for understanding the side effects of drugs and for developing new drugs. The study of pharmacokinetics is also important for understanding the relationship between the dose of a drug and its effect on the body. It is also important for understanding the side effects of drugs and for developing new drugs.
