

Redsense receives highest value order to date

Redsense Medical has secured its largest single order to date, valued at MSEK 3.7, from one of the company's US distributors.

"We are very excited about this important order for the US market. This large order gives us an excellent start of the fourth quarter. Given the challenging situation during the pandemic and the aftermath, this is a significant step in the right direction. Furthermore, this proves our strong focus on providing patient safety and the confidence that our customers place in our products" says Pontus Nobréus CEO of Redsense Medical AB.

"We continue our clear focus in the US, by showcasing our products and promoting patient safety during hemodialysis. In addition, we are working with our supply chain and distributing partners to secure the most efficient order flow and work towards consistent purchase patterns" continues Pontus Nobréus.

ABOUT REDSENSE MEDICAL

Redsense Medical is a corporate group with operations mainly in Europe and the United States. The company has developed the Redsense System, an innovation used for monitoring and alarm in the case of blood leakage in connection with a hemodialysis treatment. Redsense Medical solves one of the most serious remaining safety problems within hemodialysis – to quickly detect Venous Needle Dislodgement and catheter leakage to minimize blood leakage. The system consists of a patented fiber optic sensor, designed for either venous needle or central venous catheter, which is connected to an alarm unit. From the very start, the development of the company's technology has been based on the demands and safety requirements of healthcare providers in the dialysis sector.
